

Floating Fountain:

The miracle in Water quality conditioning

The Floating fountain not only makes a nice water feature, it adds Oxygen to the water and creates a fresh water biological environment for the water biology, water Fleas and fish to live in, it acts as a water conditioner.

Easy to install, work with 220 Volt power and come with 20m Cable which can be extended and available in 3 Models, 1/2 HP, 3/4 HP and 1 HP. The best for large applications is the 1HP Floating Fountain.

A few installations which not improve the water quality at these specific Dams but changed the water Quality to such an extent that many people start to talk about the changes.

The miracle in Water quality conditioning

Boksburg Lake, at a time of serious pollution from a Industry

In principle the process of watertreatment and the improvement on Quality can be done by Aeration and recycling, smells come from an organic environment where Organic free Fatty acids are fermented (Anaerobic, Septic) and we experience the smell of the Gaseousreaction, Methane, Sulphidesand other Fattyacid reactions. Aeration and Recyclingis what we promote for smelly Dams and water storage bodies.
